

A Scalable Solution for the Future

Salesforce Order Management

Why

A leading manufacturer of personal paper products, entered into a groundbreaking partnership with Costco to produce Kirkland brand diapers. This collaboration marks a significant milestone for the organization, as it expands its reach into the retail market while leveraging its existing manufacturing expertise.

While 90% of the anticipated business will utilize the company's established B2B fulfillment process, the remaining 10% requires a new approach. These orders, placed through Costco.com, necessitate the development of a direct-to-consumer (D2C) fulfillment process, presenting both a challenge and an opportunity for the company to innovate and grow.

What

To meet the demands of this new partnership, the company embarked on a journey to design a D2C fulfillment process tailored specifically for Costco dropship orders and implementation of the technologies that meet business objectives. Key components of this new process include order management and fulfillment, integration to Commerce Hub and SAP ERP, and warehouse management solution capabilities including pick, pack, ship and robust inventory tracking.

Slalom engaged with deep expertise in the order management and warehouse management space to understand the current order fulfillment processes and partner with the company to develop a scalable and efficient business process and make toolset recommendations for new technologies that need to be implemented as part of the future solution.

Wow

During the three-month engagement, Slalom produced a complete end-to-end process design of the holistic solution across workstreams and personas, prioritized user stories for each persona and system, an integration inventory, and complete functional and technical specifications to be leveraged as part of implementation.

This innovative system not only supports the Costco partnership but also lays the groundwork for future D2C customer fulfillment capabilities. The process and technologies defined establish a fulfillment process that is both scalable and efficient, ensuring it can handle current demands while also preparing for future growth.

Transforming the Global Customer Experience for a medical device company

Life Sciences | Medical Devices | Salesforce | MuleSoft |
Validated Environment | Data Migration | Large Program
Management | Change Management

Why

Our client, a global medical device company, is seeking opportunity to create a customer experience that will support exponentially scaling their customer base and growing revenue 3x.

In order to achieve these aggressive goals, our client needed to re-imagine the customer / patient experience for awareness, sales and ordering, onboarding, customer service and billing processes through the introduction of digital customer interactions and streamlined back-end systems and processes.

A global medical device company's Salesforce CRM transformation & journey elevated the customer experience and globalized their Sales, Service and Marketing organizations in order to scale.

What

Slalom worked closely with the client for 2 years, with initial efforts to envision the patients journey through to the roll-out of the new Salesforce enabled processes. Working in close partnership with the client, Slalom leveraged our Service Design Framework to facilitate a re-imagining of each phase of the patient journey. We then leveraged our Salesforce Delivery Framework to enable new customer- facing and internal capabilities on multiple Salesforce Lightning clouds including Communities, Health, Sales, Service and Marketing.

To enable a holistic view of the customer, we replaced a legacy integration tool with MuleSoft, which automated manual process and created a reliable flow of data across the organization.

Underlying the entire process was a robust program management structure, a holistic testing and compliance strategy, a refined data quality and governance structure, and a company-wide change program inclusive of communications, training and readiness and adoption measurement.

Wow

As a result of this program, the client is doubling down on their mission to improve the lives of individuals with diabetes through an improved customer experience, leveraging new digital interactions, improved customer insights to drive more proactive interactions, and streamlined processes to drive efficiencies. Some, but not all, of the benefits realized include:

- A new Customer Portal allowing customers to connect how they want, when they want, with options to update personal information and communication preferences, track orders, report issues, and receive offline support.
- Ability for Customer Care and Inside Sales teams to manage leads, customer accounts, opportunities, and service needs in one centralized location and seamlessly collaborate across teams via Chatter automated approval rules, and guided flows, ultimately reducing call handling time with customers.
- Providing sales teams with a 360-degree view of customers, distributors, and payers to better support HCP relationships and benefits from forecasting and pipeline management reports.
- Automated messaging, through Marketing Cloud, customized to meet the needs of prospects and customers.
- Manage payers, create payer plans, and ensure accurate payments through new, automated order gating rules and automated workflows that reduce the time and effort it takes to verify and associate a payer to customers for order preparation.

Empowering consumers to make better informed health decisions

Like most population health scientists, Slalom's client at a top-10 Integrated Delivery Network (IDN) knew that getting patients onto the right registries wouldn't make them healthier. Real change will only come from patients getting the care they need.

Using evidence-supported¹ marketing techniques like automated digital outreach in patients' preferred channels, targeted at patient segments driven by outstanding gaps in care from the EHR in Data Cloud, our client drove demonstrable improvements in care gap closure and patient engagement. By using the same methodology to address the time-intensive process of gathering patient-reported outcomes post-surgery, the same client improved response rates from below 20% to over 75% and freed clinical and support staff from a time-intensive administrative burden.

300%+

Increase in closure of a key gap in care between control and intervention cohorts

75%

Completion rate of patient-reported outcomes surveys
